

Never sail with a damaged or bent tiller extension.

Spinlock products are made from the best quality materials for durability and low maintenance in a harsh marine environment. For reliable operation, flush your tiller extension regularly with FRESH water to remove salt. Do not lubricate locking mechanism. Mineral oil & solvent based lubricants like "WD40" will accelerate the ageing of plastic components and attracts debris into ball lock mechanism.

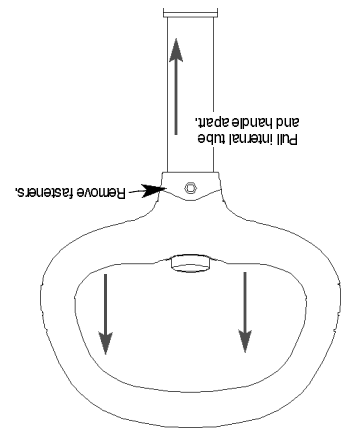

#### Maintenance

- Remove any packaging on handle or tube.
- Remove fasteners from both sides of handle, using M4 Allen key.
- Ensure tubes are extended to full extension, (maximum internal tube showing).
- Support internal tube in one hand and handle in the other.
- Guide plastic handle moulding, (blue), into internal tube ensuring rod locates in central hole.
- Internal tube is pushed into place until fastener holes are aligned with fastener holes on handle.
- Replace fasteners on both sides of handle, ensuring fasteners are secure. Loctite can be used to ensure long term security.
- Note: Do not force or strike the handle onto the tube.

#### How to install new handle / new tube

#### How to remove old handle / old tube.

- Remove fasteners from existing handle, using M4 Allen key.
- Once both fasteners have been removed, the handle can be removed from internal tube. Simply pull handle and tube apart.
